

Abstract**An electronic display system and display apparatus**

5 The present invention is an electronic display system (100) that includes one or more
electronic display apparatuses (110) wired or wirelessly connected to a network central
processor (112). Each electronic display apparatus (110) further includes a receiver
unit (114), a processor unit (116), a content database (118), driver circuitry (120), a
10 printhead (122), and an electronic display (124). The electronic display (124) is
typically a passive monochrome or full color display that is electrically writable and
erasable and retains its image until erased and re-written by another transmission. In an
alternative embodiment, electronic display (124) is a passive full-color display that is
likewise electrically writable and erasable and retains its image until erased and re-
written by another transmission.
